The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 9 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification does not provide sufficient description of the claimed "diagnostic means" to enable one having ordinary skill in the art to construct such a means.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 7, "said presence and/or motion sensors" lacks positive antecedent basis. Claim 9 is further indefinite because exactly what is to be encompassed by the term "diagnostic means" as there is no description of any structure to perform this function in the specification

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this

Art Unit: 3739

subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, and 10 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Gardenier et al.

Claims 1, 2, 6 and 10 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Sullivan.

The computer used to program the control memory of the device is considered to be the external control device

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sullivan in combination with Wilden. Sullivan teaches a device such as claimed except for the sensor. Wilden teaches the use of a sensor to determine whether or not the device is in a treatment position, and if it is, automatically turning the device on. It would have been obvious to the artisan of ordinary skill to employ the sensor and automatic treatment initiation electronics of Wilden in the device of Sullivan, since this would provide greater safety, as taught by Wilden, and in either case, to employ triple junction diodes, since these are commercially available (see the instant specification, page 5, lines 20-22) and provide a variety of colors with a single device; to employ a second processor to interpret the data from the sensor and actuate the treatment; and thus producing a device and method such as claimed.

Application/Control Number: 10612,903 Page 4

Art Unit: 3739

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sullivan in combination with Wilden, as applied to claims 1-8 and further in combination with Anderson et al. Anderson et al teach the use of light to provide both diagnosis and treatment. It would have been obvious to the artisan of ordinary skill to the artisan of ordinary skill to employ a diagnostic device in the combined device of Sullivan and Wilden, since this would enable the appropriate treatment to be administered, thus producing a device such as claimed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to david shay whose telephone number is (571) 272-4773. The examiner can normally be reached on Tuesday through Thursday from 6:30 a.m. to 5:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda Dvorak, can be reached on Monday, Tuesday, Thursday, and Friday. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
